Portfolio assignment

By Mitchell Heiser

Website Walkthrough
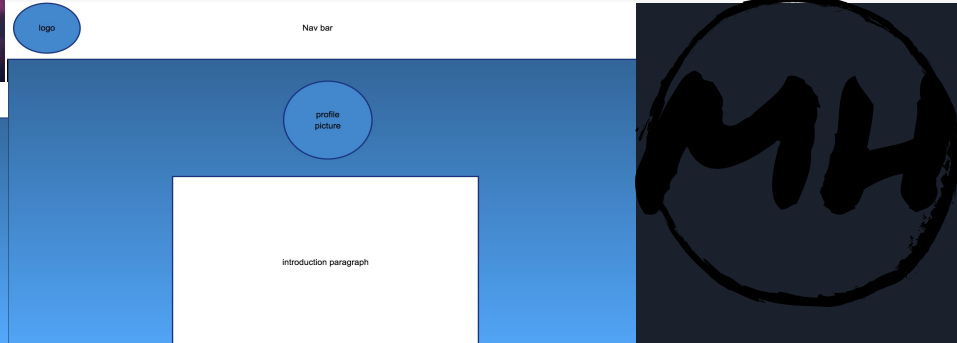

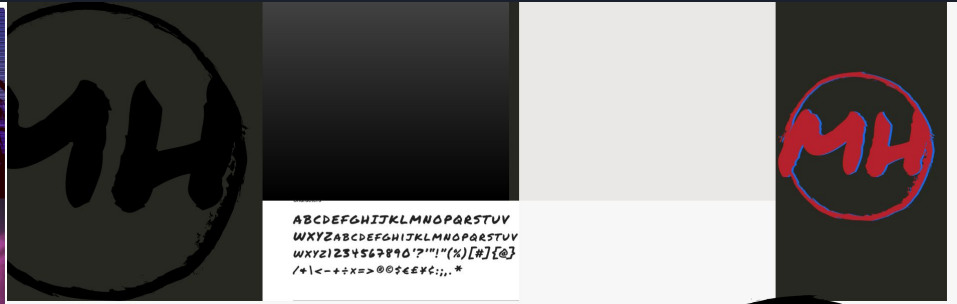

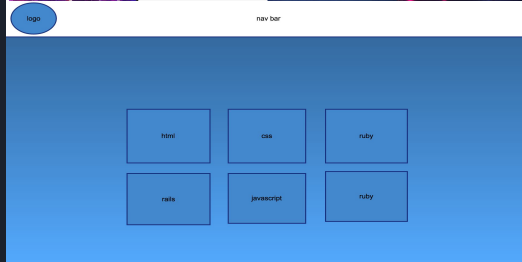

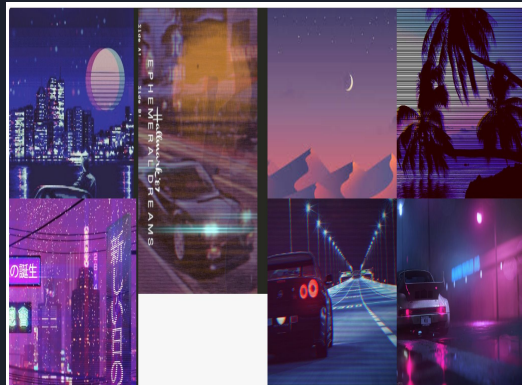

Design process

1. create logo

2. create moodboards to decide on overall design of the website

3. chose some fonts and icons

4. create more mood boards mixing in new elements gathered to decide on a final design scheme

5. make wireframes to decide on final layout

Design process

development/build process

Layed out the websites following the wireframes I made.

Did the designs for the mobile site first then work my up to standard desktops

Completed the layout for each page first then filled in the content

Used Trello make sure I kept myself on track and didn't focus too much on parts that were not necessary

challenges

The most challenging parts to this project that i found was making sure the website was responsive on all devices and getting the site into the layout that i wanted it to be in.

Favourite part

My favourite part of this assessment was all the design that goes into it such as creating the logo, making mood boards to choose themes and deciding the layout of the site.

Future Improvements

Change the hover effects of the nav so that when hovered over the icon changes to text so that users are able to understand what each icon refers to.

Set the contacts page up so that users can send me emails directly from the website.

Change the nav bar to a drop down tab when the website is on mobile devices.

Q & A

Any Questions ?
